

Project Executable Files

Date	23 June 2026
Team ID	SWTID-2026-9277
Project Name	Food Ordering Customer Behavior — Tableau Analytics Story
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	NA — Tableau project; no code dependency file, only requires Tableau Desktop / Public / Reader to open
4	Database schema / seed files (if applicable)	NA — no database used; CSV dataset (50,000 records) embedded as a Tableau Extract (.hyper) inside the .twbx file
5	Environment configuration file (.env.example or similar)	NA — no environment variables/secrets required
6	Deployed application URL (if hosted)	No — workbook is shared as a local .twbx file, not published to Tableau Public/Server
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA — not a mobile/desktop app; deliverable is a Tableau packaged workbook (.twbx)
8	Dockerfile / Containerization config (if applicable)	NA — not applicable to a Tableau workbook project
9	Test files and test results	Yes — all figures/insights independently verified against the workbook's embedded 50,000-row data extract

10	Demo video or walkthrough (if required)	Yes
----	---	-----

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Food_Ordering_Customer_Story/

food Ordering Customer Story.twbx (packaged workbook: dashboard, story, embedded extract)

food_ordering_behavior_dataset.csv (source dataset, 50,000 records)

Food_Ordering_Customer_Story_Documentation.docx (this documentation / README)

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	NA — file-based deliverable, not web-hosted
Login Credentials (Demo)	NA — no login required to open the workbook
Platform / Hosting Provider	NA — viewed locally via Tableau Desktop, Tableau Public, or Tableau Reader
Repository Link	Not provided / not applicable for this submission
Demo Video Link	Not provided / not applicable for this submission

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites: Tableau Desktop, Tableau Public, or Tableau Reader (any one)

1. Download/copy “food Ordering Customer Story.twbx” to a local folder.
2. Double-click the file, or open it from within Tableau Desktop via File → Open.
3. Tableau will unpack the embedded extract automatically — no manual extraction is needed.
4. Confirm the data source “food_ordering_behavior_dataset” shows 50,000 rows (Data pane → right-click data source → View Data).
5. Navigate to “Dashboard 1” for the combined overview, or open “Story 1” for the guided nine-point walkthrough.
6. To refresh against an updated CSV in future, replace the source file and use Data → Extract → Refresh.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Dataset appears synthetically generated with near-uniform distributions across most categorical splits	Findings should be read as a demonstration of technique rather than real market intelligence
2	Dashboard 2 and three utility worksheets (Sheet 12, Sheet 2 (2), Sheet 2 (3)) are unused build artifacts	Could be removed for a cleaner published workbook in a future revision
3	order_time is stored as a free-text string rather than a proper time/date field, limiting time-of-day trend analysis	Future enhancement: convert to a proper date/time type to unlock hour-of-day visualizations
